Product Detail:	Endothelins (ET) show potent constrictor activity in vascular and non-vascular smooth muscle. This family of 21-amino acid peptides exists in at least three isoforms - ET-1, ET-2, and ET-3, and is produced in endothelial and epithelial cells. ET's can mediate biological effects in cells and tissues, and have been shown to bind to an ET receptor in the lung, kidney, heart, and liver. Endothelin 1 is expressed in lung, placental stem villi

vessels and in cultured placental vascular smooth muscle cells.

Function:

Endothelins are endothelium-derived vasoconstrictor peptides.

Subcellular Location:

Secreted.

Tissue Specificity:

Expressed in lung, placental stem villi vessels and in cultured placental vascular smooth muscle cells.

Similarity:

Belongs to the endothelin/sarafotoxin family.

This product as supplied is intended for research use only, not for use in human, therapeutic or diagnostic applications.

内皮素(Endothelin-1,ET)是一种强的血管收缩剂,分为ET-1,ET-2,ET-3 三种,ET-1主要在endothelial cells中表达,而ET-2和ET-3则主要在神经系统中表达。

ET具有广泛的生物学作用.
