

Mouse Anti-rabbit IgG (H + L) antibody

SL0295M

Ict Name: Mouse Anti-rabbit IgG (H + L)
se Name: 小鼠抗兔IgG
Immunoglobulin G; rabbit Immunoglobulin G.
nism Species: Mouse
lity: Polyclonal
Species: Rb
cations: not yet tested in other applications. optimal dilutions/concentrations should be determined by the end user.
ular weight: 150kDa
Lyophilized or Liquid
entration: 10mg/1ml
nogen: Full length plasma protein:full length
pe: IgG
cation: affinity purified by Protein A
ge Buffer: 0.01M PBS(pH7.4)
ge: Storage: Store at -20 oC for one year. Avoid repeated freeze/thaw cycles. The lyophilized antibody is stable at room temperature for at least one month and for grea than a year when kept at -20oC. When reconstituted in sterile distilled water or diluen supplied, theantibody is stable for at least two weeks at 2-4 °C.
Immunoglobulin G (IgG), is one of the most abundant proteins in serum with normal levels between 8-17 mg/mL in adult blood. IgG is important for our defence against microorganisms and the molecules are produced by B lymphocytes as a part of our adaptive immune response. The IgG molecule has two separate functions; to bind to t pathogen that elicited the response and to recruit other cells and molecules to destroy the antigen. The variability of the IgG pool is generated by somatic recombination and the number of specificities in an individual at a given time point is estimated to be 10 variants.
