Product Detail:	The protein encoded by this gene is an epithelial-derived, integral membrane serine protease. This protease forms a complex with the Kunitz-type serine protease inhibitor, HAI-1, and is found to be activated by sphingosine 1-phosphate. This protease has been shown to cleave and activate hepatocyte growth factor/scattering factor, and urokinase plasminogen activator, which suggest the function of this protease as an epithelial

membrane activator for other proteases and latent growth factors. The expression of this protease has been associated with breast, colon, prostate, and ovarian tumors, which implicates its role in cancer invasion, and metastasis.

Subunit:

Interacts with CDCP1. May interact with TMEFF1.

Membrane; Single-pass type II membrane protein (Probable).

蛋白裂解酶是第一种已在分子水平上辨明的、与癌症相关的跨膜丝氨酸蛋白酶。他们的研究首次发现蛋白裂解酶可以诱发Tumour。蛋白裂解酶是一种The cell

membrane蛋白, 一直以来研究者们对这种蛋白裂解酶的致癌功能表示怀疑。matriptase在多种上皮来源的Tumour中均高水平表达, 有学者认为:matriptase作为一种癌基因, 为Transmembrane protein而且位于细胞表面, 部分位于胞浆。
