Product Detail:	This gene encodes a member of the oxysterol-binding protein (OSBP) family, a group of intracellular lipid receptors. Like most members, the encoded protein contains an N-terminal pleckstrin homology domain and a highly conserved C-terminal OSBP-like sterol-binding domain. Multiple transcript variants encoding different isoforms have

been found for this gene. [provided by RefSeq, Mar 2010]

Similarity:

Belongs to the OSBP family.
Contains 1 PH domain.
