<b>PubMed:</b>	<p><a href="#">PubMed</a></p> <p>MGAT5 is a mannosyl (alpha-1,6-)-glycoprotein beta-1,6-N-acetyl-glucosaminyltransferase, a glycosyltransferase involved in the synthesis of protein-bound and lipid-bound oligosaccharides. Alterations of the oligosaccharides on cell surface glycoproteins cause significant changes in the adhesive or migratory behavior of a cell. Increase in the encoded protein's activity may correlate with the progression of invasive malignancies.</p> <p><b>Function:</b> Catalyzes the addition of N-acetylglucosamine in beta 1-6 linkage to the alpha-linked mannose of biantennary N-linked oligosaccharides. It is one of the most important enzymes involved in the regulation of the biosynthesis of glycoprotein oligosaccharides.</p> <p><b>Subcellular Location:</b> Golgi apparatus membrane; Single-pass type II membrane protein.</p> <p><b>Similarity:</b> Belongs to the glycosyltransferase 18 family.</p> <p><b>SWISS:</b> Q09328</p> <p><b>Gene ID:</b> 4249</p> <p><b>Database links:</b></p> <p><a href="#">Entrez Gene: 4249</a>Human  <a href="#">Entrez Gene: 107895</a>Mouse  <a href="#">Entrez Gene: 65271</a>Rat  <a href="#">Omim: 601774</a>Human  <a href="#">SwissProt: Q09328</a>Human  <a href="#">SwissProt: Q8R4G6</a>Mouse  <a href="#">SwissProt: Q08834</a>Rat  <a href="#">Unigene: 651869</a>Human  <a href="#">Unigene: 214682</a>Mouse</p>
